

Northern White Cedar

The premier product used for log cabin, more rot and insect resistant than most species that are used for exterior sidings. Northern White Cedar is grown in the swamp of Lake Michigan, a slow growing stable tree that is kiln dried to 8-12% in a fine furniture kiln. The log cabin profiles are made to the sizes of 2 x 6, 2 x 8, and 3 x 8 and are end matched that in fact save 25% to 30% in labor costs and all accessories and also kiln dried creating a long life product. All their efforts combine to create a great product line that is exclusively made for Cedar Creek.
